VNT Turbo Calibration Update (June 06, 2007)

VNT TURBO CALIBRATION UPDATE

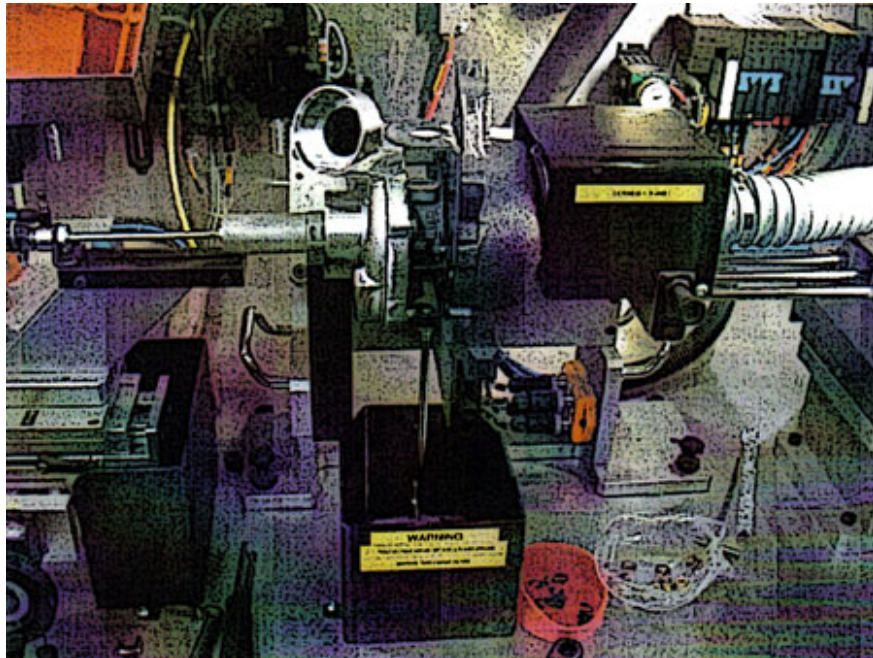

When we launched the VNT™ passenger car spares and services kits back in Amsterdam , way back in 1998, we also provided a GT15/VNT15 Service Information Manual.

The information on calibration was later updated, but there have been very many changes in VNTs™ since that date. Originally, when building or rebuilding the turbo, the minimum vane open position was set by loosening the adjustment screw, setting a dial indicator on the crank assembly and then turning the screw in until a figure of 0.30mm +/- 0,10mm was achieved.

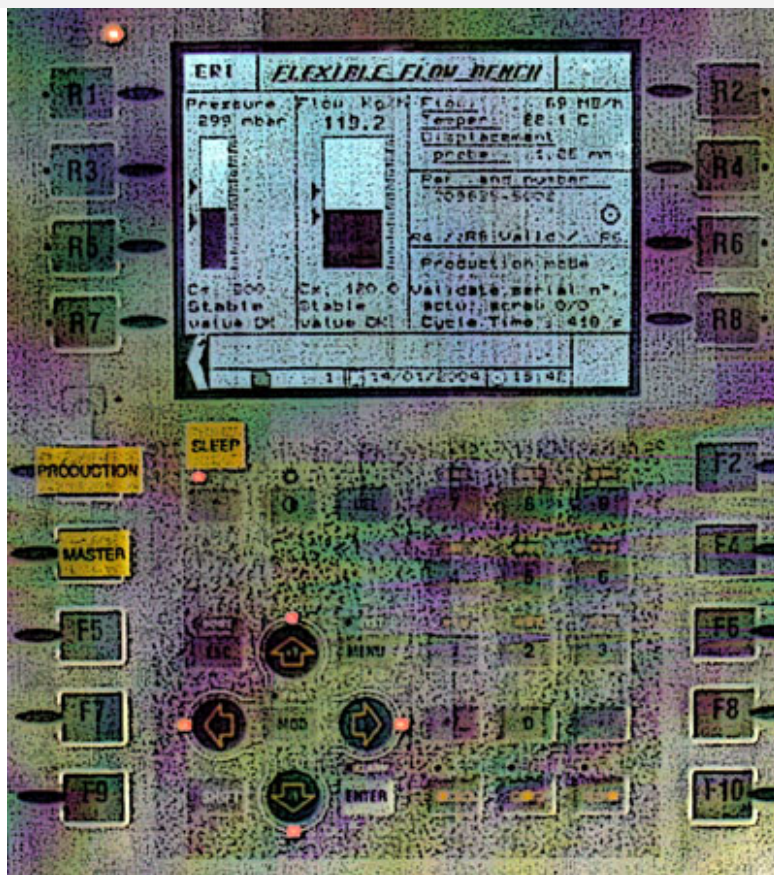

This method of setting is no longer used. It is not sufficiently accurate for the modern engines with electronic control of both the turbo and the fuelling.

We now use (in all Garrett® facilities) a Flow Bench, on which we accurately measure the airflow through the turbine housing and wheel and adjust the minimum vane open screw to achieve this figure.

IT IS NOT POSSIBLE TO ACCURATELY SET THE MINIMUM VANE OPEN POSITION WITHOUT A FLOW BENCH.

Picture shows a typical Step II VNT™ mounted in the flow bench. The rotating assembly is prevented from spinning during the test and measures the actual airflow through the vanes and the turbine housing/wheel. Just below the turbo, you can see a pneumatically (air) powered probe, which holds the vane against the minimum vane open screw. Before the test, the screw is fully loosened, and then the operator slowly adjusts the screw until the correct stable flow figure is reached. This example uses a specification of 120kg/h +/- 1.5 Kg/h.

The computer screen shown below is the actual result of setting the turbo above. Notice the pressure registers as Stable and the air mass flow of 119.2 Kg/h is within the limits of +/- 1.5 Kg/h. Also, the displacement of the adjusting screw (measured by the vertical probe) is 12.6mm. This setting varies due to the natural minor variations in production components. The most important factor is the correct air mass flow at the minimum vane open position.

Notice also the part number and the facility to record the serial numbers with the actual flow and probe displacement for each specific turbo. The machine also controls air temperature and the time taken to calibrate each turbo.

IF YOU DISASSEMBLY THE NOZZLE RING, UNISON RING, PINS AND ROLLERS FROM THE TURBINE HOUSING, THEN THE SETTING SHOULD BE CHECKED AND CORRECTED IF NECESSARY. THERE IS NO OTHER ACCURATE METHOD FOR THIS. IF THE MINIMUM VANE OPEN POSITION IS WRONG, THEN THE CALIBRATION STAGES THAT FOLLOW MAY ALSO BE WRONG.

TREVOR CASS

Product Support Engineer.

Ford/Jaguar Group Turbo Changes (May 24, 2006)

There have recently been some changes to Ford group turbos which may lead to problems with future Service Replacements. This bulletin is issued to help avoid these problems.

The compressor inlets on these turbos have been modified to include a bead, to make the inlet hose fit more securely onto the turbo. See the drawings below:

Please note that these drawings show a *typical* turbo from this group, not a specific part number.

Whilst this is a very minor change, both Ford and our own applications engineers insist that the new turbos are NOT designed to be directly interchangeable with the older non-beaded type. The inlet hose has also been modified to suit this change. The hoses are made from hard plastic and the older type hose will not fit onto the new compressor inlet with a bead.

To ensure that you supply the correct turbo to your customer, you will need to find out the exact application and **either** supply the turbo with a new hose (sourced by yourselves locally) **or** advise your customer to fit a new hose from the Ford or Jaguar dealer.

The table below shows the turbo part numbers affected by this change with their applications. You will notice that in some cases, the same part number is used on different applications. For this reason, it is not possible for us to include a new hose with the turbo – you must find out exactly which application your customer has ordered the turbo for, and then supply the turbo with the correct hose.

Garrett Re-Invents the T-Series! (March 13, 2006)

How do you get more reability and durability with less need for rebuilding without upgrading your system to a Garrett GT turbo? Upgrade your current T3/T4 or TO4B center cartridge to a patented Garrett Dual Ball-Bearing Cartridge!

Why upgrade?

- **Quality** – Using the same OE-based testing that uses for world-renown Garrett GT series turbos, the new center housings upgrades for the T-series turbos are rigorously beaten and pushed to their limits to ensure that they can wear the Garrett badge.
- **Dependability** – With a true Garrett dual ball-bearing turbo, there is less need to rebuilding. Garrett dual ball-bearing use less oil and handle pressure more efficiently and effectively than journal bearings. These are the same dual ball-bearing cartridges used in nearly all Garrett Motorsports applications.
- **Easy Installation** – All those hours you put into installing, tuning, honing and planning your turbo kit won't have to be double with a completly new turbo. In fact, the installation is as easy as removing your old journal or hybrid-bearing center housing and replacing it with a true Garrett dual ball bearing cartridge. Place your current compressor and turbine housings on, hook up the water line and put it back into your engine bay. You may even use your housings if you have another manufacturer's turbo!

COMPANY

Official distributor in Spain 

History

Since 1980 when Antonio Camarasaltas Ruiz founded Turbomaster the company has been solely committed to the turbocharger industry. We were originally located on Azcona Street in Madrid, but the increase in our sales activities and volume of business caused us to move to our current location.

Commercial Activity

First as ROTO-MASTER's and since 1980 as Garrett's authorized dealers in Spain, all our business's activities have revolved around the turbo world. In the beginning, we were involved with public works machinery. With the introduction of the turbocharger in trucks and buses, we expanded our reach. Finally with the arrival of the standard personal vehicle, the turbocharger became universal. Nevertheless we could not neglect those other sectors that although minor in scale, are still very important to us, such as marine engines, generators, railroad applications, racing applications, etc...

Services

Either directly or through our extensive commercial network, we are able to deliver a requested part anywhere in Spain within 24 hours.

TurboMaster Quicktime video:

- Minimum resolution (655 kb)
- Medium resolution (2.307 kb)
- Complete resolution (50.371 kb)

Repairs and Technical Assistance

We repair and recondition all types of turbochargers in our facilities, Garrett as well as all other brands. Our repair system guarantees that 90% of the orders that enter our shops are completed within 24 hours.

Courses

We offer courses on a regular basis about new models launched in the market. The focus of our courses is practical as well as theoretical.
